Ling landings by region

Accepted management plan

The latest Advice from ICES in May 2017 states:

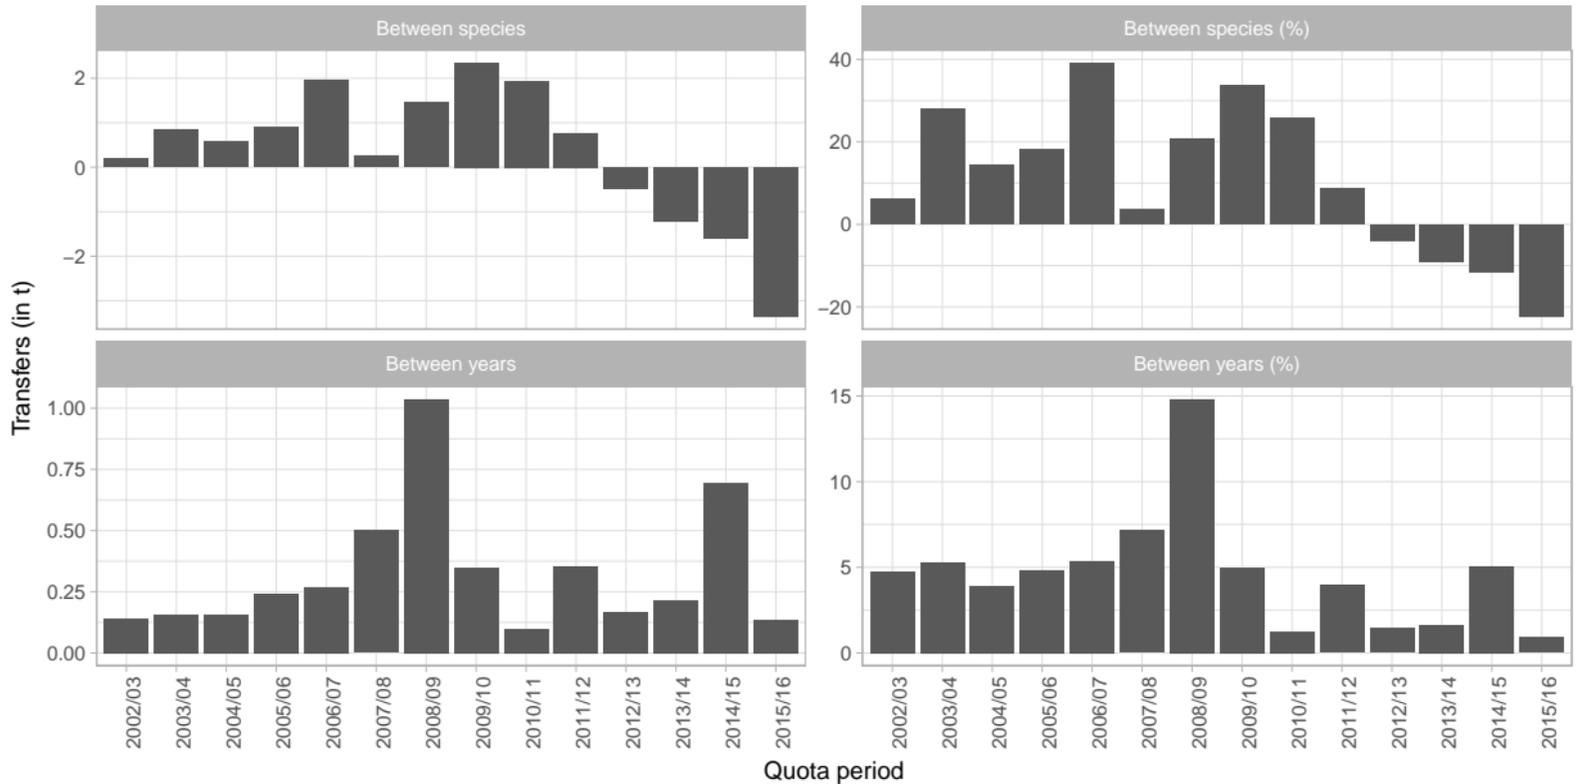

ICES advised that when the management plan is applied, catches in the 2017/2018 fishing year should be no more than 8 598 tonnes. All catches are assumed to be landed.

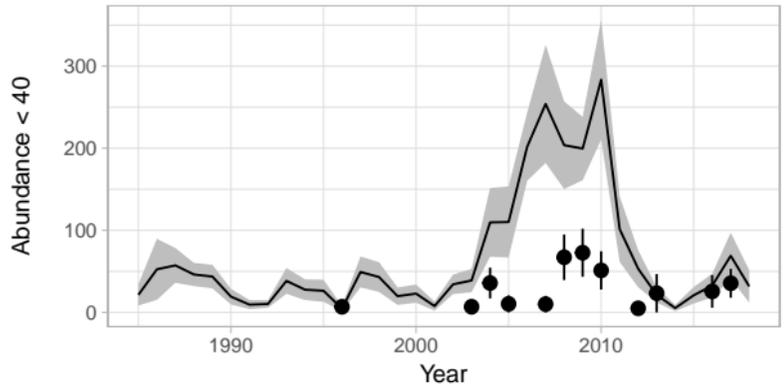

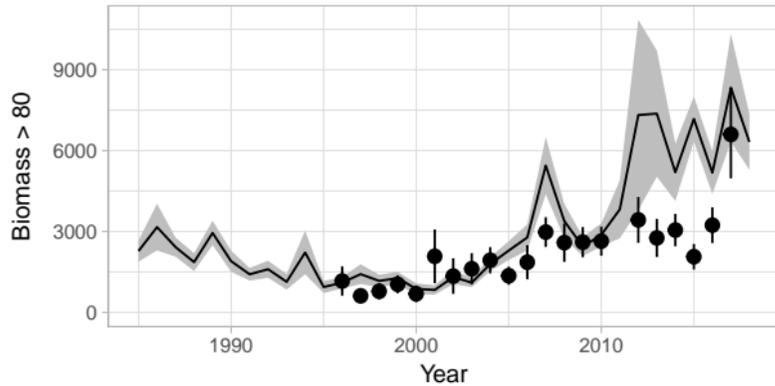

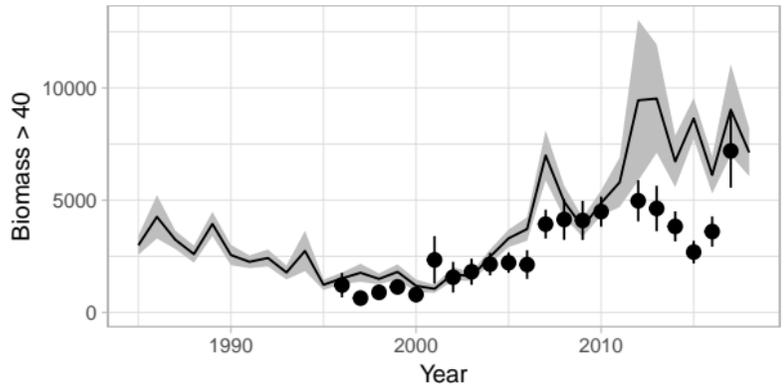

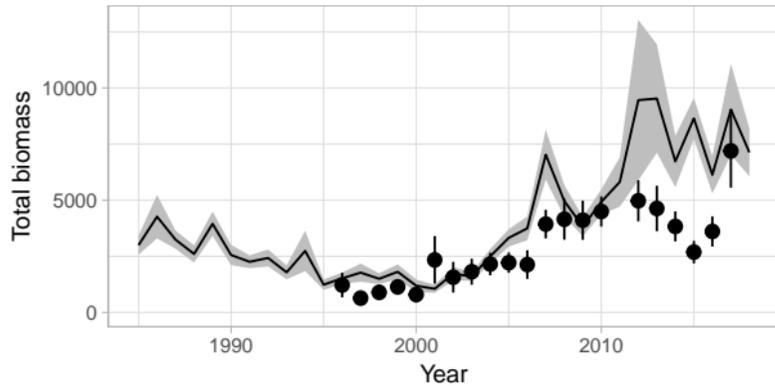

Management of ling in Iceland (Va)

Fishing Year	MFRI Advice	National TAC	Landings
1999/00			3961
2000/01			3451

Trends in biomass and juvenile abundance

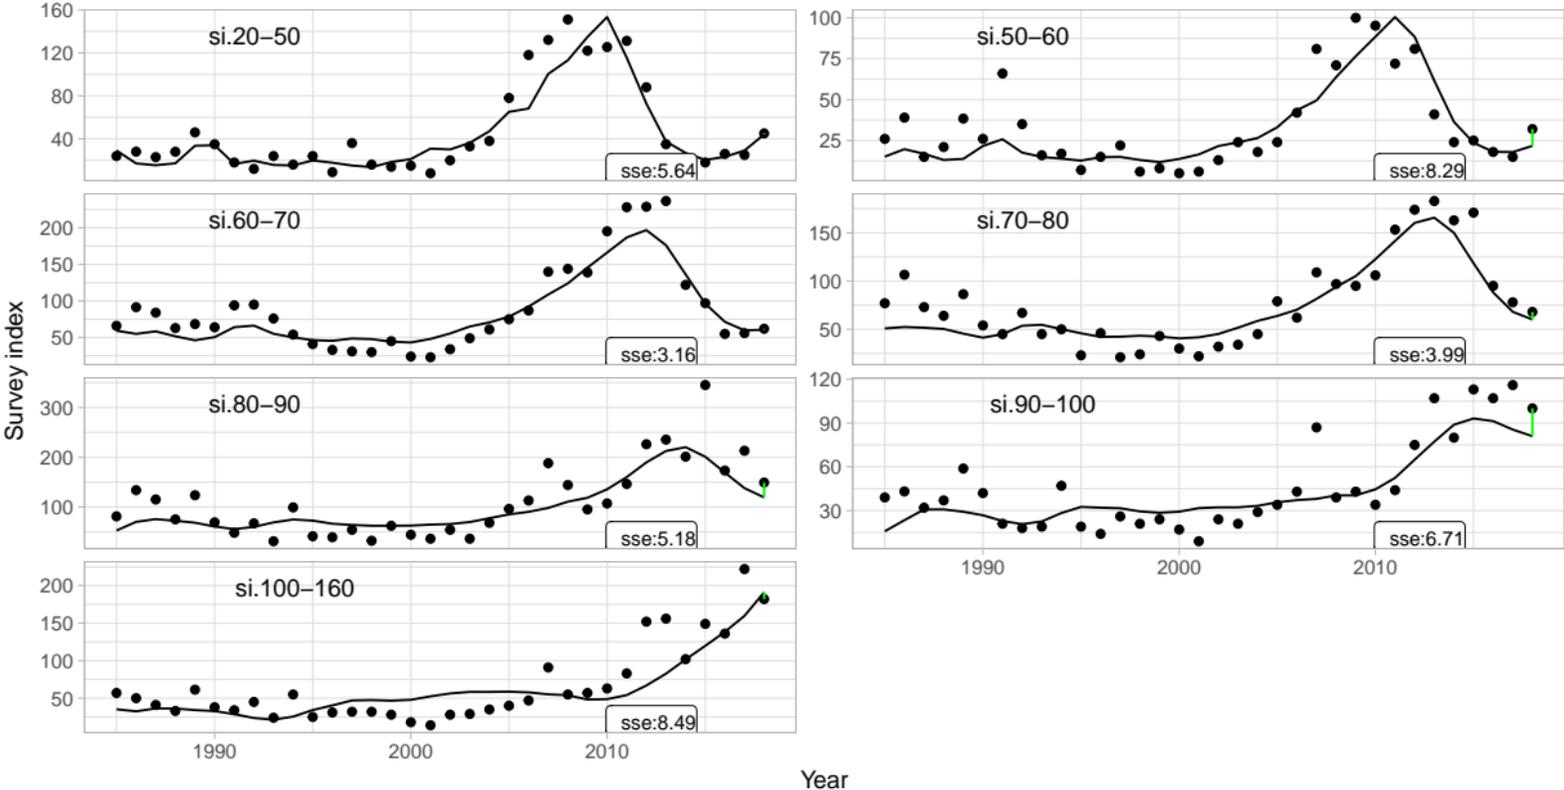

Observational data for Gadget length- and age-based model

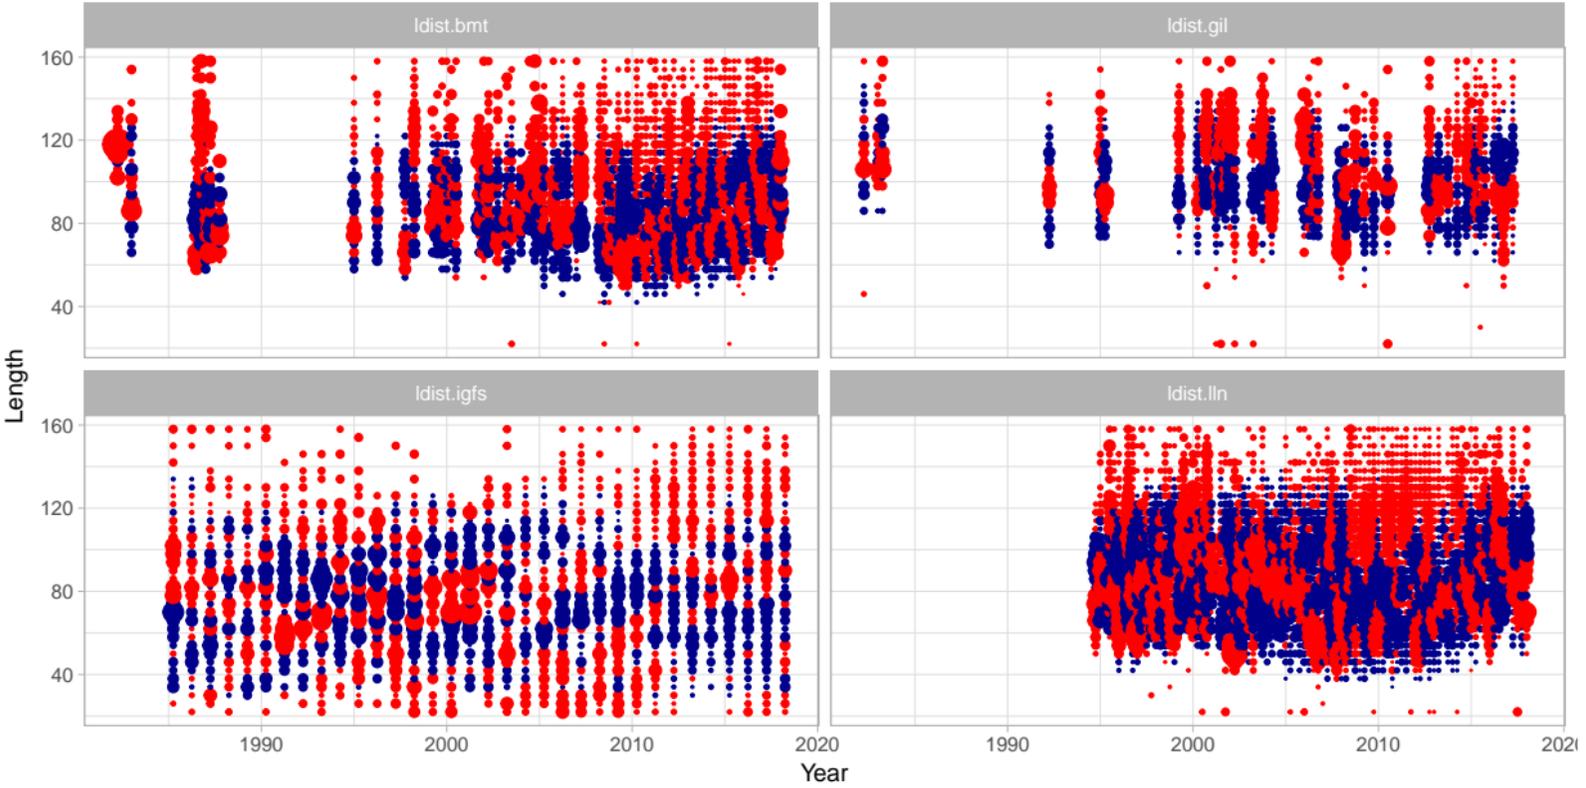

- Survey indices from the Icelandic groundfish survey from 1985, split into 7 slices in 10 cm intervals.
 - lengths 20–160 cm in 4 cm bins
 - ages 3–15
- Survey samples from 1985 (as available):
 - proportion at length
 - proportion at length and age
 - proportion mature at length
- Commercial samples from 1982 (as available - longlines, gillnets, bottom trawl fleets)
 - proportion at length by gear
 - proportion at length and age by gear
- Commercial catches by gear since 1982

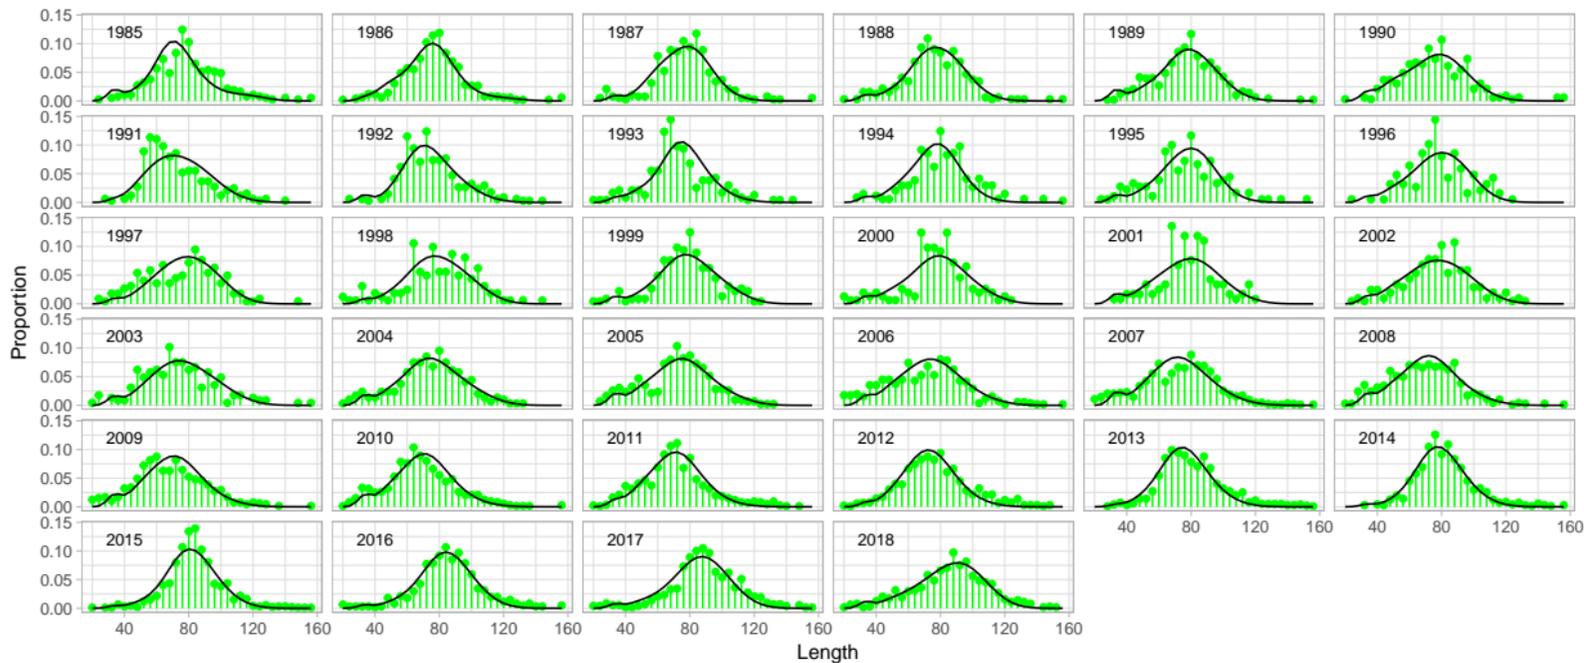

Fit to data – Indices

Fit to data – longline age distributions

Fit to data – longline growth data

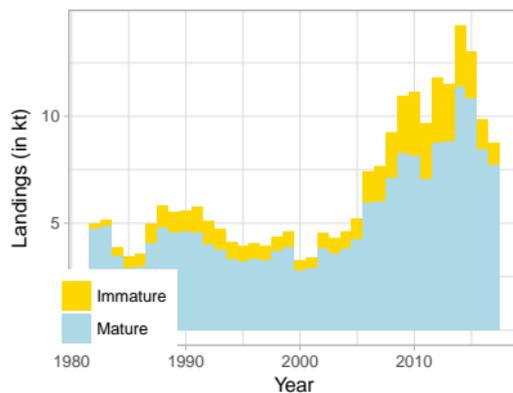

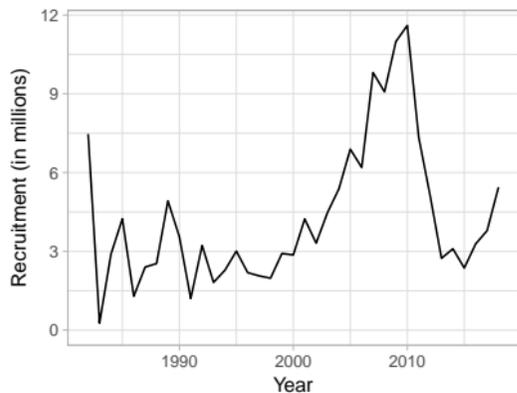

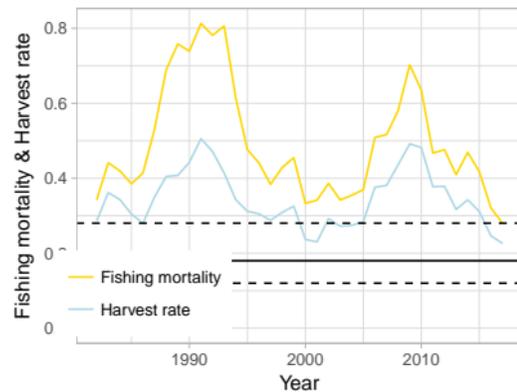

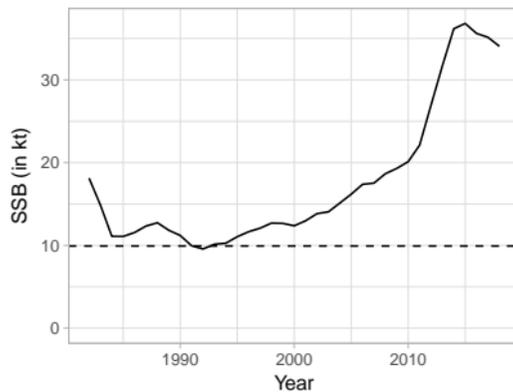

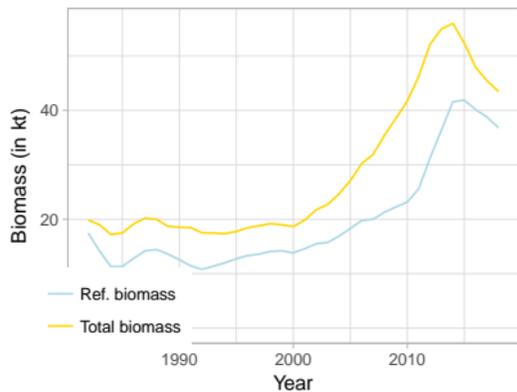

Fit to data – survey maturity

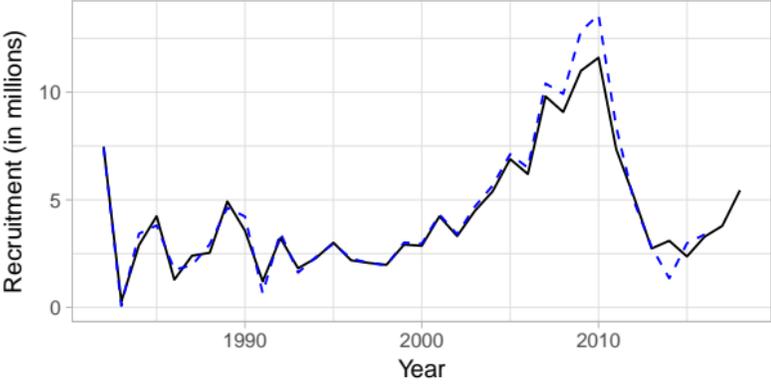

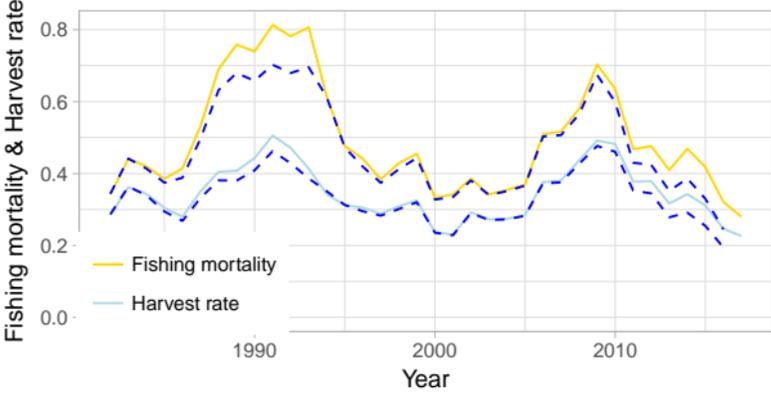

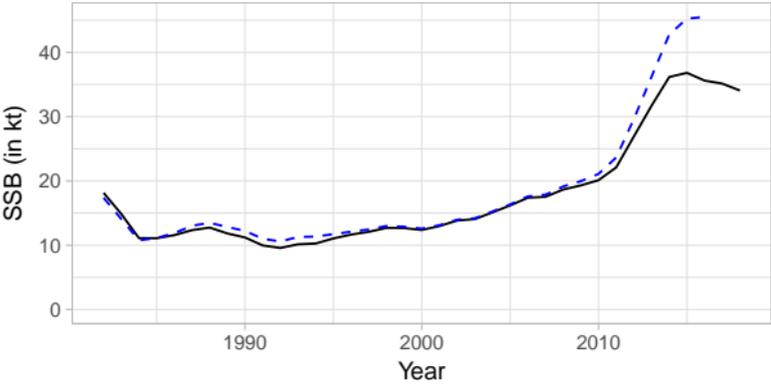

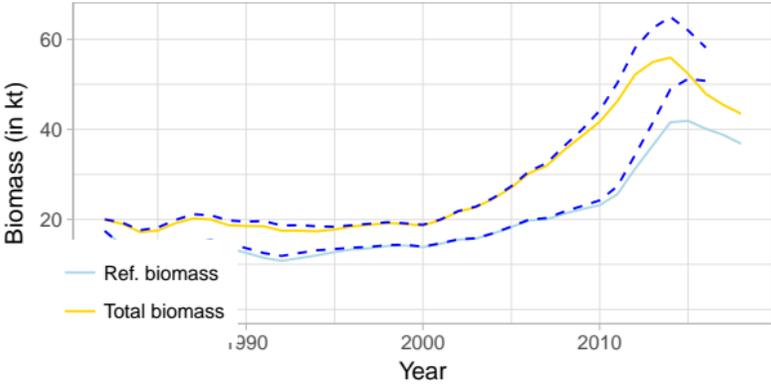

Tafla: Ling in 5a. Summary of reference points for ling in 5a.

Framework	Reference point	Value	Technical basis
MSY approach	MSY $B_{trigger}$	9.93 kt	B_{pa} The harvest rate that maximises the median long-term catch in stochastic simulations with recruitment drawn from a block bootstrap of historical recruitment scaled according to a hockey stick recruitment function with B_{loss} as defined below.
	H_{msy}	0.24	
Precautionary approach	F_{msy}	0.284	The median fishing mortality when an harvest rate of H_{msy} is applied.
	B_{lim}	7.09 kt	$B_{pa}/e^{1.645\sigma}$ where $\sigma = 0.2$
	B_{pa}	9.93 kt	SSB(1992), corresponding to B_{loss}
	H_{lim}	0.56	H corresponding to 50% long-term probability of $SSB > B_{lim}$
	F_{lim}	0.70	F corresponding to H_{lim}
	F_{pa}	0.41	$F_{lim}/e^{1.645\sigma}$ where $\sigma = 0.33$
Management plan	H_{pa}	0.35	H corresponding to F_{pa}
	H_{mp}	0.18	H such that $P(SSB < B_{pa} \text{for any given year}) < 0.05$.

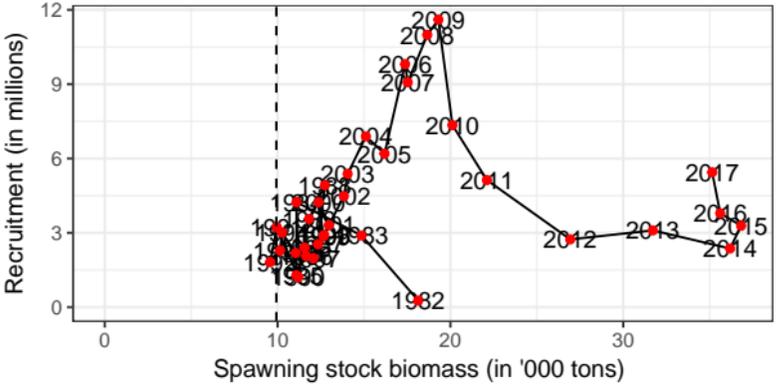

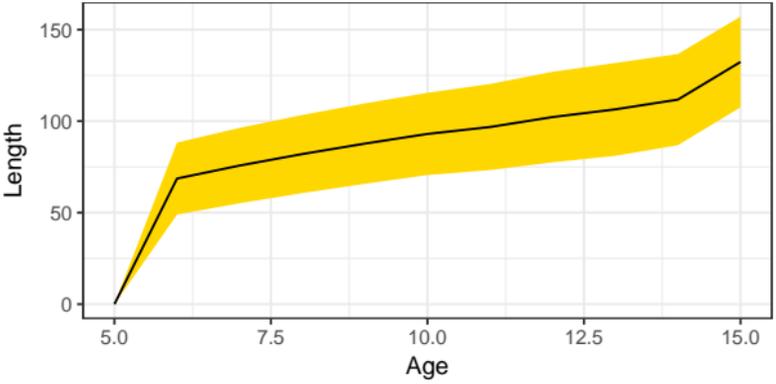

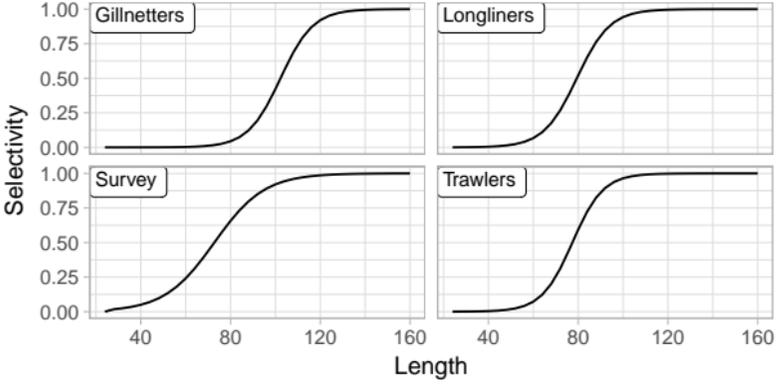

Assessment results

Comparison with previous assessment

Other derived quantities

Prognosis

When the management plan is applied, it is advised that no more than 6 074 tonnes ling are caught for the 2018/2019 fishing year.

- By calendar year

Year	HR	Catch	RefB	SSB
2016	0.268	9.88	37.30	35.85
2017	0.242	8.77	36.76	35.29
2018	0.257	8.79	34.75	34.20
2019	0.185	6.02	32.56	31.93
2020	0.179	5.86	32.58	31.91
2021	0.176	5.94	33.48	32.69

- By fishing year

Year	HR	Catch	RefB	SSB
2015/2016	0.299	11.08	37.30	35.85
2016/2017	0.230	8.34	36.76	35.29
2017/2018	0.248	8.60	34.75	34.20
2018/2019	0.186	6.07	32.56	31.93
2019/2020	0.180	5.85	32.58	31.91
2020/2021	0.177	5.89	33.48	32.69
